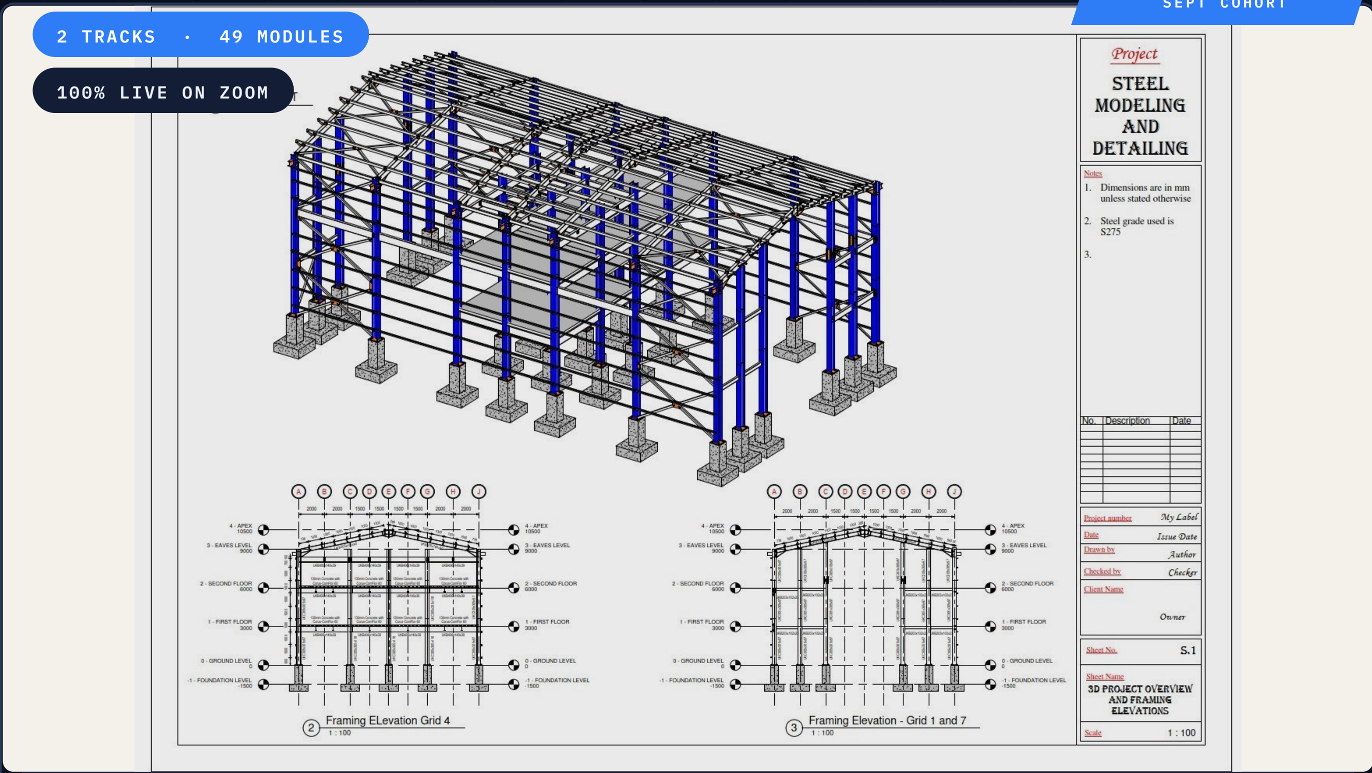
100% LIVE ON ZOOM



STEEL PORTAL FRAME STRUCTURE — 3D PROJECT OVERVIEW & FRAMING ELEVATIONS

FIG. 01

START	FORMAT	RHYTHM	FEE
14 SEPT 2026	LIVE · ONLINE	WEEKDAY EVENINGS	KSH 2,500 / TRACK

01 — THE PROGRAM

One program. Two *buildable* tracks.

Revit for Structures is a hands-on Autodesk Revit program for engineering students and early-career professionals who want to build real, buildable structural models. Two focused tracks — Reinforced Concrete and Steel — each run from first launch to finished documentation: modelling, reinforcement and connections, schedules, and sheets that print clean.

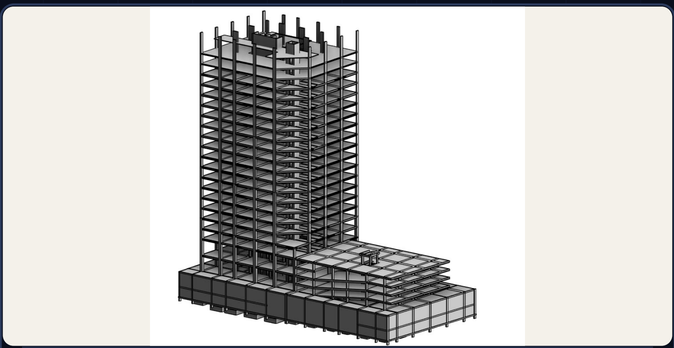
01
Model the whole frame
Columns to slabs,
rafters to bracing.

02
Detail like a pro
Rebar,
tags, bolts, plates & cuts.

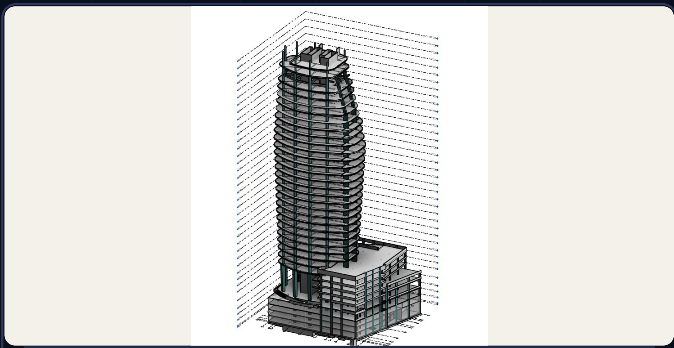
03
Quantify & schedule
Bar bending schedules & takeoffs.

04
Document & deliver
Sheets,
PDFs, CAD & analysis handoff.

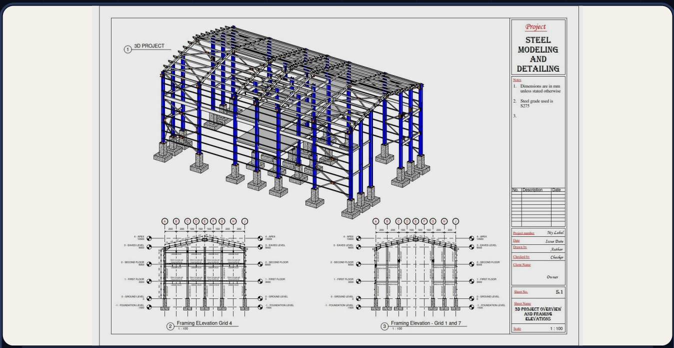
WHAT YOU WILL MODEL — REAL, STUDENT-GRADE OUTPUT



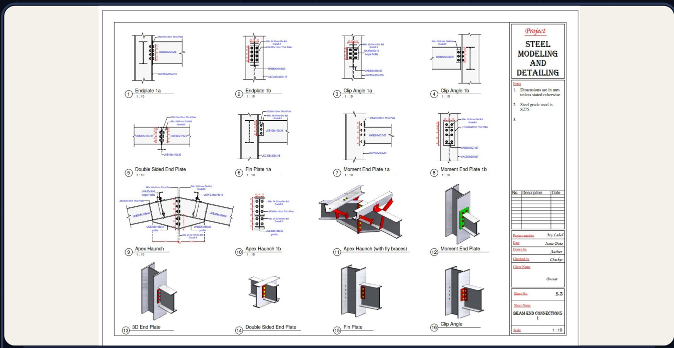
21 FLOORS + 2 BASEMENTS FIG. 02



32 FLOORS + 4 BASEMENTS FIG. 03



STEEL PORTAL FRAME STRUCTURE FIG. 04



STEEL CONNECTIONS FIG. 05

CHOOSE YOUR TRACK — OR TAKE BOTH

TRACK 01
REINFORCED CONCRETE
20 modules · Grids BBS · p. 3

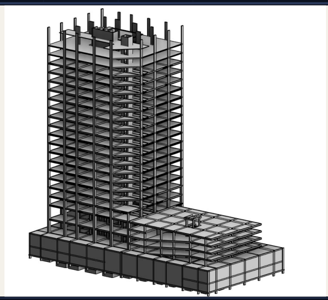
TRACK 02
STEEL STRUCTURES
29 modules · Columns Connections · p. 5

02 — TRACK 01 · REINFORCED CONCRETE · 20 MODULES

FROM DATUMS TO DOCUMENTATION

Reinforced concrete, modelled to the rebar.

RC



21 FLOORS + 2 BASEMENTS — REINFORCED-CONCRETE TOWER FRAME, MODELLED IN REVIT FIG. 02

A · GROUNDWORK — 01–05

01 BRIEF OVERVIEW OF REVIT
How Revit thinks · Revit vs AutoCAD · Why BIM wins

02 SETTING UP THE SOFTWARE
Essential libraries · Autodesk extensions

03 BEGINNING WITH REVIT
New projects · Templates · Palettes · tabs · panels

04 DATUM ELEMENTS
Levels · Grids · Propagating extents · Grid-bubble styling · Linking CAD for grids

05 3D ELEMENTS, FIRST PASS
Foundations · Columns · Beams · Slabs

B · MODELLING THE FRAME — 06–10

06 COLUMNS
Placement · Loading families

07 FOUNDATIONS
Hosting on columns · Strip footings · Eccentricity · Basement slabs · Family libraries

08 BEAMS & SLABS
Copy level-to-level · Slab creation · Hollow-pot & waffle

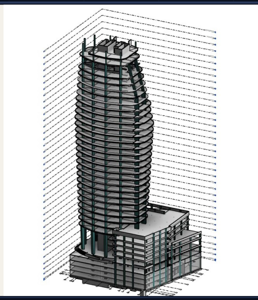
09 CURVED BEAMS
Modelling procedure, end to end

10 BEAM SYSTEMS & JUSTIFICATION
Beam-system modelling · Layout rules · Justification rules · Deselecting cleanly

02 — TRACK 01 · REINFORCED CONCRETE, CONTINUED

Detail, reinforce, then deliver.

Stairs, rebar, tags, sheets.



32 FLOORS + 4 BASEMENTS — CURVED TOWER WITH LEVELS & GRIDS, MODELLED IN REVIT

FIG. 03

C · DETAIL & REINFORCE — 11–16

11 **STAIRCASES & RAMPS**
Stair types · Architectural vs structural ramps · Stairs modelled as ramps · Shaft openings

12 **VISIBILITY, GRAPHICS & FILTERS**
Graphic overrides — methods 1–4

13 **ROOFS & TRUSSES**
Sloped & gable-ended roofs · System trusses · Custom trusses

14 **REINFORCEMENT**
Sections first · Foundations · Columns · Beams · Slabs · Stairs · Ramps

15 **ANNOTATIONS**
Dimensions · Spot elevations · Spot coordinates · Spot slopes

16 **SECTION DETAILING**
Breaklines · Hatch regions · Rebar tags · Comments · Element tags

D · DOCUMENT & DELIVER — 17–20

17 **SCHEDULES & TAKEOFFS**
Bar bending schedules · Shape images in BBS · Material takeoffs · Sorting & filtering

18 **DRAWINGS ON SHEETS**
Titleblock sizes · System blocks · Custom blocks · Text & fields · Saving family templates · Duplicates · Placing views

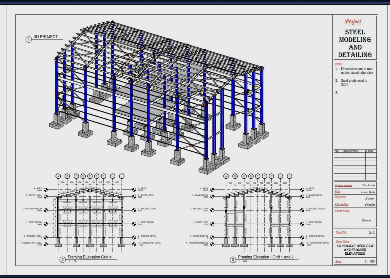
19 **PRINTING TO PDF**
Sheet setup · Single sheets · Batch printing

20 **EXPORT & HANDOVER**
Export options · To AutoCAD · To analysis

03 — TRACK 02 · STEEL STRUCTURES · 29 MODULES

COLUMNS · RAFTERS · BEAMS · BRACING

Steel, from first column to custom connection.



STEEL PORTAL FRAME STRUCTURE — EAVES, APEX & FRAMING ELEVATIONS, MODELLED IN REVIT

FIG. 04

A · GROUNDWORK — 01–04

01 **BRIEF OVERVIEW OF REVIT**
How Revit thinks · Revit vs CAD · Why BIM wins

02 **SETTING UP THE SOFTWARE**
Essential libraries · Autodesk extensions

03 **BEGINNING WITH REVIT**
New projects · Templates · Palettes · tabs · panels

04 **DATUM ELEMENTS**
Levels · Grids · Elevation markers · Propagating extents · Grid-bubble styling · Linking CAD

B · THE STEEL FRAME — 05–10

05 **STEEL COLUMNS**
Placement · Loading families

06 **CONCRETE COLUMNS**
Placement · Loading families

07 **FOUNDATIONS**
Hosting on columns · Extended family libraries

08 **RAFTERS**
Placement · Steel beam sections · Attaching columns · Copying grid-to-grid

09 **STEEL BEAMS**
Sections · Floor beams · Justification rules · Copying · Eaves-level beams

10 **BEAM SYSTEMS & JUSTIFICATION**
Beam-system modelling · Layout rules · Justification rules · Deselecting

03 — TRACK 02 · STEEL, CONTINUED

Roofs, openings, bracing & views.

Composite decks to live sections.

S2

C · ROOF, BRACING & VIEWS — 11–21

NEXT — THE CONNECTION LIBRARY
Thirteen connection families plus your own customs — overleaf.
P. 07

03 — TRACK 02 · CONNECTIONS & DELIVERY

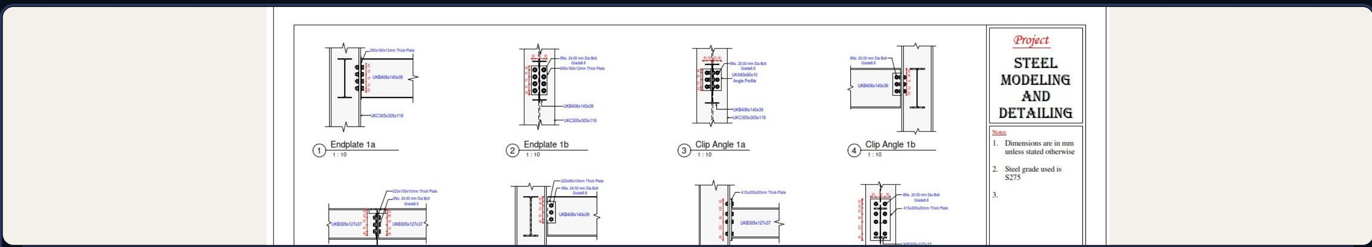
The connection library. *Applied, propagated, detailed.*

22 · CONNECTION TYPES — THE LIBRARY

Main types first, then every family you will meet on a real frame —

Main types · Haunch · Apex · Base plate · Gusset — bracing · Gusset — column-base · Purlin / side-rail · End plate, single-sided (simple) · End plate, single-sided (moment) · End plate, double-sided (simple) · Fin plate · Clip angle · Column splice · Custom connections

APPLIED LIVE — MODULE 21 · UPLOAD → APPLY → PROPAGATE



STEEL CONNECTIONS — END PLATES, CLIP ANGLES & MOMENT DETAILS AT 1:10 FIG. 05

D · FABRICATION — 23

23 FABRICATION & PARAMETRIC CUTS

Elements & modifiers · Where cuts live · Use & location

E · DOCUMENT & DELIVER — 24–29

24 ANNOTATIONS

Dimensions · Spot elevations · Coordinates · Slopes · Custom bolt & plate tags

25 SECTION DETAILING

Breaklines · Hatch regions · Rebar tags · Comments · Element tags

26 SCHEDULES & TAKEOFFS

Bar bending schedules · Shape images in BBS · Material takeoffs · Sorting & filtering

27 DRAWINGS ON SHEETS

Titleblock sizes · System blocks · Custom blocks · Text & fields · Saving family templates · Duplicates · Placing views

28 PRINTING TO PDF

Sheet setup · Single sheets · Batch printing

29 EXPORT & HANDOVER

Export options · To AutoCAD · To analysis

04 — JOIN THE COHORT

Join the September cohort.

Live, online and hands-on – from the third week of September.

SCHEDULE

START	Mon 14 Sept 2026
RHYTHM	Weekday evenings
FORMAT	Live on Zoom
TRACK	4 weeks each

Take either track — or both, back to back.

INVESTMENT

KSH **2,500**

per track · live instruction + materials

Students & early-career engineers
No prior Revit experience needed.
Just a laptop that runs Revit.

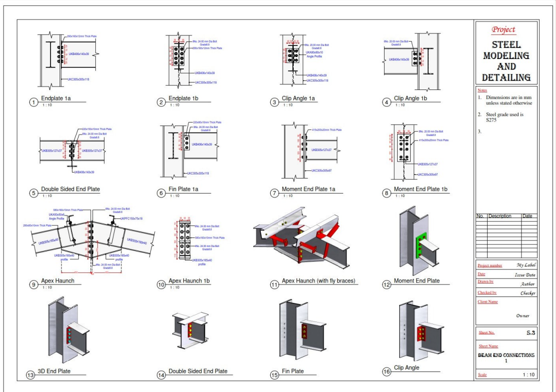
HOW IT WORKS

1 Reserve your seat
Write to us via the website and pick a track.

2 Set up Revit
We guide libraries & extensions before day one.

3 Build live
Evenings on Zoom — model, detail, document.

GRADUATE WITH SHEETS LIKE THIS



STEEL CONNECTIONS — BEAM END CONNECTIONS (S.3) AT 1:10, MODELLED & DETAILED IN REVIT S.3

SEATS ARE LIMITED — SEPTEMBER COHORT

structratraining.co.ke

ENROL →

Reserve your track — Concrete, Steel, or both.
