

Revit Concrete Structure Training

A complete, module-by-module outline of the concrete modeling course from datum setup and the Revit interface through columns, foundations, beams, slabs, reinforcement, schedules and construction documentation.

20 modules 72 hands-on sub-topics 20-session track

COURSE MODULES

Reinforced Concrete Structures Track

1. Brief overview of Revit (what it entails)

- Difference with AutoCAD software
- Benefits over AutoCAD software

2. Setting up the software

- Brief introduction of Libraries required
- Downloading other extensions from Autodesk site

3. Beginning with Revit

- Creating a new project
- An overview of the templates
- An overview of palettes, tabs and panels

4. Creating Datum Elements

- Creating Levels
- Creating grids (same as with the levels creation)
- Propagate options extents on the grid
- Customizing and changing the shape and appearance of grid bubbles
- Linking CAD files to create grids

5. Brief Overview of Creating 3D elements

Foundations, Columns, Beams, Slabs

6. Creating Columns

Placement of columns
Loading column families

7. Creating Foundations

Hosting foundations on the columns created
Creating Strip footing
Using eccentricity option
Basement floor slab
Loading foundation families into your drawings

8. Creating Beams and slabs

Copying beams and slabs from level to level
Creating a slab
Hollow pot and waffle slab

9. Curved Beams

Procedure of modeling the curved beams

10. Beam System Layout and Justification Rules

Using the beam system to model the structural beams
Modelling the beams using the beam system layout rules
Modelling the beams using the beam system Justification Rules
Deselecting the beam system

11. Creating Staircase and Ramps

Types of staircase
Creating an architectural ramp and structural ramp
Modeling Staircase as a ramp
Shaft openings

12. Visibility/Graphics and Filters

Applying Visibility/Graphic Overrides	Method 1
Applying Visibility/Graphic Overrides	Method 2
Applying Visibility/Graphic Overrides	Method 3
Applying Visibility/Graphic Overrides	Method 4

13. Creating Roofs and Truss placement

Sloped and gable ended roofing
Adding system trusses on your roof
Editing and creating your own customized trusses

14. Placing of Reinforcement

Creating sections in your drawing
Foundation Reinforcement
Column Reinforcement
Beam Reinforcement
Slab reinforcement
Staircase reinforcement
Ramp reinforcement

15. Annotations

- Adding dimensions
- Adding spot elevations
- Adding spot coordinates
- Adding spot slope

16. Detailing of Sections

- Placing breaklines in the sections
- Using hatch files to create regions
- Placement of rebar tags on your reinforcements
- Adding comments on your reinforcement
- Tagging of the structural elements

17. Schedules and Material Takeoffs

- Creating Bar Bending Schedules
- Loading shape images into bar bending schedules
- Creating Material Takeoffs for the structural elements
- Sorting and filtering fields in material takeoffs and bar bending schedules

18. Placing Drawings on Sheets

- Loading different paper sizes for your title blocks
- Using system loaded title blocks
- Editing and customizing the title blocks
- Adjusting texts and fields in your title block
- Saving title blocks as a Revit family template
- Introduction to duplicate options for drawings
- Placing drawings on the sheets

19. Printing Sheets to PDF format

- Setting up your sheets before printing
- Printing one sheet at a time
- Printing several sheets at a time

20. Conversion of your files into CAD and other formats

- Export options for your drawing into other formats
- Transporting your drawing to AutoCAD
- Sending your model for analysis
