

REVIT STEEL STRUCTURE TRAINING

Table of Contents

1. Brief overview of Revit (what it entails)	1
❖ Difference with CAD software	1
❖ Benefits over CAD software	1
2. Setting up the software	1
❖ Brief introduction of Libraries required	1
❖ Downloading other extensions from Autodesk site	1
3. Beginning with Revit	1
❖ Creating a new project	1
❖ An overview of the templates	1
❖ An overview of palettes, tabs and panels	2
4. Creating Datum Elements	2
❖ Creating Levels	2
❖ Creating Grids	2
❖ Elevation Markers	3
❖ Propagate options extents on the grid	3
❖ Customizing and changing the shape and appearance of grid bubbles (optional)	3
❖ Linking CAD files to create grids	3
5. Modeling Steel Columns	3
❖ Placement of columns	3
❖ Loading column families	3
6. Modeling Concrete Columns	4
❖ Placement of concrete columns	4
❖ Loading column families	4

7.	Modeling the Foundations.....	4
❖	Hosting foundations on the columns created	4
❖	Loading other foundation families into your drawings	4
8.	Modeling the rafters	4
❖	Placement of Rafters	4
❖	Loading steel beam sections	5
❖	Attaching Columns to the rafters	5
❖	Copying rafters from grid to grid	5
9.	Modelling of the Steel Beams	5
❖	Loading steel beam sections	5
❖	Modelling of the floor beams	5
❖	Justification Rule of the Beams	5
❖	Copying of the floor beams	6
❖	Modelling of the Beams at the Eaves Level	6
10.	Beam System Layout and Justification Rules	6
❖	Using the beam system to model the structural beams	6
❖	Modelling the beams using the beam system layout rules	7
❖	Modelling the beams using the beam system Justification Rules.....	7
❖	Deselecting the beam system	8
11.	Composite Slab and Composite Beam	8
❖	Modelling the Composite Beam	8
❖	Modelling the Composite Slab	9
❖	Cantilever the Composite Slab.....	9
12.	Floor Openings.....	10
❖	Using the Shaft Opening Tool	10
13.	Curved Beams	10
❖	Procedure of modeling the curved beams	10

14.	Sloped/Slanted Beams.....	11
❖	Modelling sloped beams using the offset tool	11
❖	Modelling sloped beams using the Framing Elevation	11
15.	Purlins and Side Rails	11
❖	Modelling the Purlins using Reference Planes	11
❖	Modelling the Purlins using the Beam System	12
❖	Modelling the Side Rails	13
16.	Bracings	13
❖	Vertical Bracings	13
❖	Horizontal Bracing	14
17.	Visibility/Graphics and Filters	14
❖	Applying Visibility/Graphic Overrides → Method 1	14
❖	Applying Visibility/Graphic Overrides → Method 2	15
❖	Applying Visibility/Graphic Overrides → Method 3	15
❖	Applying Visibility/Graphic Overrides → Method 4	15
❖	Hiding Elements	16
18.	Creating Sections	16
❖	Types of Sections	16
❖	Creating sections in your drawing	17
19.	Placing of Reinforcement	17
❖	Setting up the Reinforcement Cover	17
❖	Placing Reinforcement at the Foundation	18
❖	Column Reinforcement	18
❖	Slab reinforcement	18
20.	Splitting Elements	19
❖	Splitting Elements	19

21.	Introduction to Connections	19
❖	Uploading the Connections.....	19
❖	Applying Connections to the Structural Elements	19
❖	Propagate the Connections	20
22.	Connection Types.....	21
❖	Main Types of Connection	21
❖	Haunch Connection	21
❖	Apex Connection	21
❖	Base Plate Connection.....	21
❖	Gusset Plate Bracing Connection.....	21
❖	Gusset Plate Column-Base Plate Connection	21
❖	Purlin Connection / Side Rail Connection.....	22
❖	Single sided end plate (simple connection)	22
❖	Single sided end plate (moment connection)	22
❖	Double sided end plate (simple connection)	22
❖	Fin plate (simple connection)	22
❖	Clip Angle (simple connection).....	22
❖	Column Splice connection	22
❖	Creating Custom Connections	23
23.	Fabrication Elements, Modifiers and Parametric Cuts	23
❖	Use and Location	23
24.	Annotations.....	23
❖	Adding dimensions	23
❖	Adding spot elevations	23
❖	Adding spot coordinates.....	23
❖	Adding spot slope	23
❖	Creating Custom Bolt and Plate tags.....	24

25.	Detailing of Sections	24
❖	Placing breaklines in the sections	24
❖	Using hatch files to create regions.....	24
❖	Placement of rebar tags on your reinforcements.....	24
❖	Adding comments on your reinforcement.....	25
❖	Tagging of the structural elements	25
26.	Schedules and Material Takeoffs	25
❖	Creating Bar Bending Schedules	25
❖	Loading shape images into bar bending schedules.....	25
❖	Creating Material Takeoffs for the structural elements.....	25
❖	Sorting and filtering fields in material takeoffs and bar bending schedules	25
27.	Placing Drawings on Sheets	26
❖	Loading different paper sizes for your title blocks	26
❖	Using system loaded title blocks	26
❖	Editing and customizing the title blocks.....	26
❖	Adjusting texts and fields in your title block	26
❖	Saving title blocks as a Revit family template	26
❖	Introduction to duplicate options for drawings.....	26
❖	Placing drawings on the sheets.....	27
28.	Printing Sheets to PDF format	28
❖	Setting up your sheets before printing	28
❖	Printing one sheet at a time	28
❖	Printing several sheets at a time	28
29.	Conversion of your files into CAD and other formats	28
❖	Export options for your drawing into other formats	28
❖	Transporting your drawing to AutoCAD.....	28
❖	Sending your model for analysis	28
